**Contents**
- Pages: 2
- Tables: 9
- Figures: 6

**Document No.**: PD AE 8603

**Date of issue**: JAN'86

**Keywords**: SLV

**Abstract**:

Force measurements were made on one of the two boosters of the Augmented Satellite Launch Vehicle (ASLV) model, at Mach numbers 0.8, 1.0 and 2.1 at angles of incidence in the range -6 to 6 degrees in the N.A.L 1.2M Trisonic Wind Tunnel. These measurements were made to supplement the force and pressure measurements made earlier on the same configuration. Results of the tests are given in this document.
