Abstract

This report presents a cross-indexed data base for infrared signature reduction studies. This bibliography is based on open literature from 1960 to 2004, and is selected for their potential for aerospace applications. The references include books, journal and symposia papers, patents, thesis and technical reports. The cross-indexing aspects emphasizes the Author, Source and Subject indices, besides a classification of the primary and secondary themes dealt in these references. This database helps in identifying the various techniques, methods as well as military and non-defense applications of infrared signature reduction.
